* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) Three day hold time may not be practically achievable, particularly for samples from remote locations. Maxxam attempts to commence analysis as soon as possible. Exceedance of hold time increases the uncertainty of test results, but does not necessarily imply that the results are compromised.

(2) Chlordane (Total) = Alpha Chlordane + Gamma Chlordane

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (one or both samples < 5x RDL).

(1) Recovery or RPD for this parameter is outside control limits. The overall quality control for this analysis meets acceptability criteria.
