Are you ready for summer storms?

Prepare your home with these tips:

- Check seals around windows and doors.
- Clear debris from downspouts and eavestroughs, ensuring they point away from your house.
- Secure loose objects outside to prevent hazards in strong winds.

For more tips, visit
cochrane.ca/summersafety

Clear out your swale

Swales are shallow drainage channels designed to direct stormwater away from buildings and help prevent flooding. If you have a swale on your property, it is your responsibility to keep it clear of debris, landscaping materials and other obstructions to ensure water can flow freely.
